

How to measure for Hosenträger

- The man must wear his Lederhose. Make sure it sits at the right position, not too low!
- Don't measure yourself
- Stand upright
- Measure snug against the body

The following information is required for each Hosenträger order (in cm or inches):

- Name of person
- Gesamtlänge: total length of the straps, starting from front button, over the shoulder, across in the back, to back button.
- Vorderlänge: front length from front button to the needle, where the clasp connects the front to the back piece.

Best is to measure the Vorderlänge while wearing an existing Träger. Then you can easier compare, where the shield is supposed to sit.

You can also wear your vest, to see which height is good for the Quersteg (center connecting strap) to look out of the vest cut.

Please make sure you measure the Vorderlänge not too long.

When you sit down, the shield comes up!

How to measure the Vorderlänge if the Quersteg is too low

- The man must wear his Lederhose, Träger and vest
- If the Quersteg is too low (vest concealed the Quersteg) the top button of the vest must be buttoned
- Measuring tape from above to the lowest point of the Quersteg (leather) and measure until the beginning of the vest
- Let the man sit down to check the measurement (measure from the highest point (leather) of the Quersteg and add the measured measure, so you can see if the Quersteg is too high.)

You can tell us the measurements in inch or cm.

If you don't know the Vorderlänge, we will make a standard length.

It will take around 3 weeks to make the suspenders tailormade.

Please let me know if you have any questions. If you aren't sure, just send me a picture while you are measuring a person.

Looking forward to making you a perfect fitting Träger! :)

Vroni
