

How to mount a coin?

What do you need:

- a coin
- one fitting holder
- one piece of wood for bending
- smooth surface, preferably with an edge

How it works:

- place the coin in the holder, align the coin, check the frontside
- carefully place the coin with the holder on a smooth surface, then let the loop hang over the edge so that the coin is straight
- carefully bend the 6 tabs with a piece of wood so that the coin is firm and does not slip anymore

Remember:

- if the coin is too big for a smaller holder, but too small for a larger one, you can take an adapter ring that will not allow the coin to slip
- if the coin is so small that it falls through the holder, you will need a smaller holder

Coins and holders are offered from us of course :)

Let us know, if you will need an adapter ring and we will include it.
